                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ρy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Š
              CC cell regulatory proteins (CRPs) termed the p63 family of proteins, CC which demonstrate certain sequence identity to known tumour CC suppressor proteins p53 and p73. Mouse p63 cDNA was isolated using CC RACE. Sequencing of the amplification product indicated that the CC amplified cDNA possessed a truncated N-terminus, i.e. the CT can be corresponded to the corresponding CC to exons 5-9 of p63. At least 6 different isotypes exist. Splice CC variants differing at the C-terminus are designated as alpha, beta CC and gamma forms, while p63 members differing in the N-terminus are CC designated as deltaN and TA forms, where the deltaN form lacks the CC transactivation domain. The present sequence represents mouse p63 corresponding CC isotype mu-deltaNp63 beta. p63 was detected in a variety of human and mouse tissue. It demonstrates remarkably divergent CC activities, such as the ability to transactivate p53 reporter genes CC and induce apoptosis. Cessation or down-regulation of p63 expression CC may play a critical role in the process of cervical squamous of inferentiation, both benign and neoplastic. DeltaN isotopes of p63 act as dominant negatives towards transactivation by p53 and p63. CC catevaxia) and neuronal differentiation and related degenerative contextal and neuronal deliferentiation and related degenerative colleges (see advocated in a process of p63 act as dominant negatives towards transactivation by p53 and p63. CC catevaxia) and neuronal differentiation and related degenerative colleges (see advocated in a particle of the process of p63 colleges of p63 and p63. The process of p63 colleges of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              CC intron-exon organisation is conserved between p/3 and p53, and from CK known exon and intron sizes for these 2 genes, it was possible to cidentify new members of this gene family using a pCR-based strategy CC identify new members of this gene family using a pCR-based strategy CC intron. The human p53 gene was localised to chromosomal position CC 3927-29. At least 6 different isotypes exist. Splice variants CC differing at the C-terminus have been designated as alpha, beta and CR designated as deltaw and TR forms, where the deltaw form lacks the CC transactivation domain. The present sequence represents human CC p63 isotype hu-deltawp63 alpha. p63 was detected in a variety CC of human and mouse tissue. It demonstrates remarkably divergent CC and induce apoptosis. Cessation or down-regulation of p63 expression CC may play a critical role in the process of cervical squamous CC act as dominant negatives towards transactivation by p53 and p63. CC act may also be implicated in haematopoiesis, muscle wasting (e.g. CC cachexia) and neuronal differentiation and related degenerative CC disorders. p63 polypeptides (see AAV58572-83) and solypeptides (see AAV58573-84), polypucleotides (see CC cathexia) and section and diagnosis, and in the production of CC cidentify compounds useful for treating disorders involving such CC cransgence animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                  (e.g. rheumatoid arthritis or cancer) associated with mutuant provided (e.g. recilular protein isoform dependent on heat shock protein (HSP)-90 (e.g. p53), or selectively treating cells expressing mutant protein or cellular protein isoform in a patient heterozygous for (II). The method is useful for treating a disease e.g. haematopoietic disorder such as T or B cell lymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, or a disease characterised by a solid tumour such as papililary thyroid carcinoma, Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and synovial sarcoma. The method is also useful for treating viral infections. This is the amino acid sequence of a human oncogenic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Chromosome aberration; oncogenic fusion protein; cancer; oncogene; proliferative disease; cellular protein isoform; heat shock protein 9 HSP-90; rheumatoid arthritis; cancer; haematopoietic disorder; T cell lymphona; B cell lymphoma; Chronic myeloid leukaemia; CML; acute myeloid leukaemia; AML; chronic myelomocytic leukaemia; CMML; acute lymphoblastic leukaemia; ALL; APL; NHL; solid tumour; papillary thyroid carcinoma; Fwing's sarcoma; melanoma; liposarcoma; rhabdomyosarcoma; synovial sarcoma; viral infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                     protein (HSP)-90, or selectively treating cells expressing (II) involving administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding oncogenic fusion protein, treating cancerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins, e.g. cell proliferative diseases, involves administering an inhibitor of heat shock protein 90
        Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  cell population, treating proliferative diseases associated with protein or cellular protein isoforms (II) dependent on heat shock
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human oncogene p51 isoform

protein (nar)-y, of structure, there is useful for chivolying administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding treating genetically-defined disease with chromosomal aberration fusion conceptic fusion protein, treating cancerous cells containing fusion conceptic fusion protein, treating calcaded with mutant protein or cellular protein in heterogeneous cell population, treating proliferative disease cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. cellular protein isoform dependent on heat shock protein or cellular protein isoform in a patient heterozygous for (II). The method is useful creating a disease e.g. haematopietic disorder such as T or B cell creating a disease e.g. haematopietic disorder such as T or B cell creating a disease characterised by a solid tumour such as papillary thyroid carcinoma, Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and carcinoma, Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and carcinoma. This is the amino acid sequence of a human oncogenic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous protein (I), treating proliferative diseases associated with mutant cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein or cellular protein isoforms (II) dependent on heat shock protein (HSP) 90, or selectively treating cells expressing (II) involving administering HSP90-inhibitor. The method is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Disclosure; Page 346-348; 389pp;

The polypeptides and polynucleotides are especially lung cancer, in a patient. Methods described in the invention detection at subsequent time points and comparing the results from the are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit development of cancer.
                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 243-245; 261pp; English.

The present invention describes isolated human lung carcinoma CC polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic CC activity, and can be used in gene therapy and in vaccines. Compositions CC comprising (I) or (II) can be used for stimulating an immune response in CC (I) can be used for detecting lung cancer in a patient. Oilgonucleotides of CC (I) can be used for detecting the presence of a cancer in a patient, by biological sample with the oilgonucleotide, detecting in the sample, an CC comparing the amount of polynucleotide that hybridises to the oilgonucleotide and CC comparing the amount of polynucleotide that hybridises to the oilgonucleotide and CC comparing the amount of polynucleotide that hybridises to the configuration of a cancer in the patient. (I) and (II) are useful in CC pharmaceutical compositions, e.g. vaccines. (I) is useful as a marker to CC ABG92145 to ABG92868 and ABG9186 to ABG9192 represent sequences used CC in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Ωy

Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABIA4895 to ABIA4300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Qγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             transactivation domain was absent. Additional splice variants were definitified by screening a cDNA library with a probe corresponding to examinate differing at the C-terminus are designated as alpha, beta and gamma forms, while p63 members differing in the N-terminus are designated as alpha, beta and gamma forms, while p63 members differing in the N-terminus are designated as deltan and TA forms, where the deltan form lacks the C transactivation domain. The present sequence represents mouse p63 classified muscle tissue. It demonstrates remarkably divergent activities, such as the ability to transactivate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression cmay play a critical role in the process of cervical squamous of differentiation, both benign and neoplastic. Deltan isotopes of p63 cachexia) and neuronal differentiation and related degenerative cachexia) and neuronal differentiation and related degenerative disorders. p63 polypeptides (see AAV58572-83) and pati-p63 antibodies of the invention can be used to identify compounds useful for treating disorders involving such contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

Mouse p63 cNNA was isolated using RACE. Sequencing of the amplification product indicated that the amplified cNNA possessed a truncated N-terminus, i.e. the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated p63 cell regulatory protein for,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cancer. The polypeptides and polynucleotides can be used to stimulate T cells or antigen presenting cells for use in the treatment of lung cancer. The polypeptides and monoclonal antibodies specific for the polypeptides can also be used to inhibit the development of lung cancer. Agents which bind the polypeptides can be used for detecting lung cancer and for monitoring the progression of lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence

                              This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit

Sequence 339, Application US/09850716A

Patent No. US20020115139A1

GENERAL INFORMATION:
APPLICANT: Kalos, Michael D.
APPLICANT: MCNeill, Patricia D.
APPLICANT: MCNeill, Patricia D.
APPLICANT: Retter, Marc W.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THE
TITLE OF INVENTION: AND DIAGNOSIS OF LUNG CANCER
FILE REFERENCE: 210121.455C15
CURRENT APPLICATION NUMBER: US/09/850,716A
CURRENT FILING DATE: 2001-05-07
NUMBER OF SEQ ID NOS: 440
SOUTHARE: FastSEQ for Windows Version 3.0
SEQ ID NO 339
LENGTH: 641
TYPE: PRT
CREANISM: USCO SERVICES

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      OM protein - protein search, using sw model
                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
